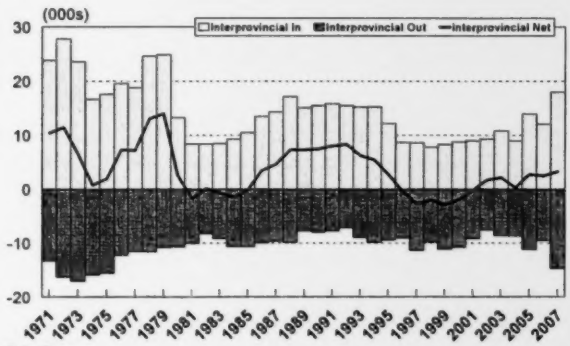
Migration Highlights ◆ Fourth Quarter 2007

During the fourth quarter of 2007 the population of British Columbia grew by an estimated 11,042 persons, resulting in a January 1st, 2008 total population of 4,413,973. This growth in population was due to gains from other parts of Canada and the world, as well as an excess of births over deaths.

B.C.'s population grew at a rate of 1.5 percent between January 1st of 2007 and 2008, behind only Nunavut (2.0 percent), Alberta (2.0 percent), and Saskatchewan (1.7 percent). All other provinces and territories had growth rates at or below the national average of 1.1 percent.

Fig 1: Inter-provincial Migration 4th Quarter

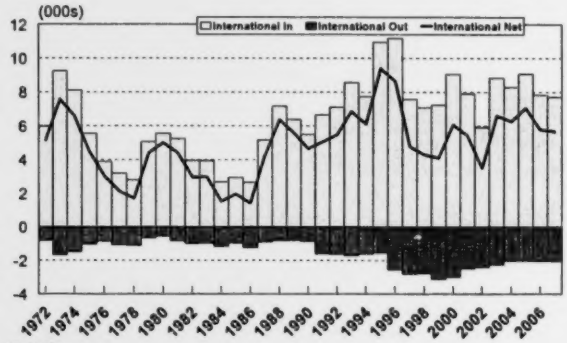


Data Source:
Statistics Canada

During the fourth quarter of 2007, B.C. gained 12,073 and lost 9,574 inter-provincial migrants, resulting in the highest net inter-provincial migration of all regions (2,499) for the second straight quarter. The only regions to which B.C. lost population during the fourth quarter were the Atlantic provinces (198), Saskatchewan (163) , and the Territories (19). The largest numbers of in-migrants to the province arrived from Alberta (6,386) and Ontario (3,056).

With 2007 annual net inter-provincial net migration at 13,385, a 31 percent increase over 2006, B.C. received more annual net inter-provincial migrants than any other region for the first time since 1996.

Fig 2: International Migration 4th Quarter



Data Source:
Statistics Canada

Net international migration continued as the main contributor to B.C.'s population growth over the October 1, 2007 to January 1, 2008 period. A total of 5,664 net international migrants were added to B.C.'s population over this quarter. The number of immigrant arrivals, 9,281 persons, composed 16.7 percent of Canada's total arrivals in the quarter.

Natural increase (the excess of births over deaths) added 2,879 persons to the population. Deaths, as the baby boom ages into the higher mortality age groups, continued to trend up, at 7,921. Fourth quarter births (10,800) were also up over 2006.

Population Change Fourth Quarter 2007	
Population October 1, 2007	4,402,931
Plus Interprovincial Arrivals	12,073
Minus Interprovincial Departures	9,574
Plus Immigrants	9,281
Minus Total Net Emigrants	2,050
Plus Net Non-Permanent Residents	-1,567
Plus Births	10,800
Minus Deaths	7,921

Intra-Provincial Migration of the Aboriginal Identity Population ◆ March 2008

Compared to our knowledge of the B.C. population as a whole, our understanding of the migration patterns specific to Aboriginal individuals is minimal. In what follows, we will briefly examine mobility data from the 2001 Canadian Census and garner what insights we can about who is moving in B.C.'s Aboriginal communities, and where are they moving to.

It must first be noted that it is difficult to obtain reliable demographic data on the Aboriginal communities in British Columbia. Few data sources identify members of Aboriginal communities, and those that do may suffer quality issues that make them impractical for studying migration patterns. Additionally, Aboriginal communities are diverse and defy simple categorization. Nonetheless, analysis of the data that does exist can provide important insights into this complex group and lead to more reliable information to aid in community benchmarking and policy evaluation.

The Canadian Census provides some of the best data on Aboriginal peoples as far as consistency and comprehensiveness is concerned. Since the 1996 census, individuals have been asked whether they identify with North American Indians, Métis, Inuit, or some mixture thereof. And as the census occurs at regular intervals and includes questions on mobility and migration, it is an ample source of data on the intra-provincial migration of Aboriginal peoples.

Composition of B.C.'s Aboriginal Peoples

In the 2001 Census, 170,000 British Columbians declared an Aboriginal Identity, constituting 4.4% of the provincial population. As of the 2001 Census nearly 70% of B.C.'s Aboriginal Identity population is North American Indian, and over 25% is Métis. Inuit and individuals who identify with multiple groups account for less than 5% of B.C.'s Aboriginal Identity population. It is not surprising that Inuit are such a small minority of the population, as the traditional Inuit regions lie north and east of B.C.'s borders.

Table 1: Aboriginal Identity Population by Health Authority

	Total Aboriginal Identity Population	North American Indian	Métis	Inuit	Other
British Columbia	170,025	118,295	44,270	805	6,660
Interior	36,775	24,330	11,200	285	955
Fraser	32,945	19,835	11,475	215	1,420
Van Coastal	22,800	17,505	4,160	75	1,050
Van Island	33,335	24,210	7,520	160	1,440
Northern	44,165	32,405	9,905	70	1,790

Table 2: Aboriginal Identity Migration by Health Authority of Destination

	Total Aboriginal Identity Population	North American Indian	Métis	Inuit	Other
British Columbia	12,435	8,780	3,125	60	470
Interior	3,010	2,010	845	40	110
Fraser	2,740	1,725	930	20	60
Van Coastal	1,190	970	190	0	30
Van Island	2,715	1,995	590	0	130
Northern	2,780	2,070	565	0	135

Examining the Aboriginal Identity population regionally by B.C.'s five health authorities, the largest number of Aboriginal Identity persons, or more than one quarter of the provincial population, make their home in the Northern Health Authority. The Vancouver Coastal Health Authority had the smallest number Aboriginal Identity individuals, constituting fewer than 14% of B.C.'s Aboriginal Identity population. Among North American Indians, the most populous regions are the Northern, Interior, and Vancouver Island Health Authorities, while more than half of B.C.'s Métis live in the Fraser and Interior Health Authorities.

Intra-Provincial Migration

The Census provides us with data on mobility in the 12 months prior to May 2001. Therefore, only individuals 1 year of age and older are included in the migration data. Within the Aboriginal Identity population older than 1 year old, nearly 12,500 individuals migrated to a different Census Subdivision within the province in the twelve months prior to the Census.[1] In all of the Aboriginal Identity groups, intra-provincial migrants constituted between 7% and 8% of the total 2001 population.

Examination of these intra-provincial migrants by region indicates that many migrants relocated within a health authority. Only about 4,800 Aboriginal Identity individuals migrated across health authority boundaries. The Vancouver Costal Health Authority was the least likely destination for all groups. However, the distribution of migrants is not identical for all Aboriginal Identity groups: North American Indian migrants spread out rather evenly among the Interior, Fraser, Vancouver Island, and Northern Health Authorities; more than half of the Métis migrants were destined for the Fraser and Interior Health Authorities; and the only recorded Inuit migrants were a small number destined for the Interior and Fraser Health Authorities.

To gain more insight into the flow of intra-provincial migrants in B.C., Table 3 provides the region of origin and destination for B.C.'s combined Aboriginal Identity population. One interesting feature is that among the intra-provincial migrants, about 60% move within their health authority. Indeed, all regions except the Vancouver Coastal Health Authority exhibit migration levels within Health Authorities at a much higher level than between health authorities. This is also true among both the North American Indians and the Métis.

[1] A Census Subdivision is a small geographic area, often representative of a municipality or Indian Reserve.

Table 3: Total Aboriginal Identity Population, Migration Origin and Destination

		Origin				
		Interior	Fraser	Van Coastal	Van Island	Northern
Destination	Interior	1840	285	300	195	390
	Fraser	205	1580	425	325	200
	Van Coastal	155	320	325	225	160
	Van Island	155	260	290	1850	165
	Northern	245	165	165	145	2050

Table 4: North American Indian, Migration Origin and Destination

		Origin				
		Interior	Fraser	Van Coastal	Van Island	Northern
Destination	Interior	1240	170	220	115	265
	Fraser	155	970	270	235	100
	Van Coastal	125	225	270	185	155
	Van Island	80	140	195	1460	115
	Northern	165	145	150	115	1495

Table 5: Métis, Migration Origin and Destination

		Origin				
		Interior	Fraser	Van Coastal	Van Island	Northern
Destination	Interior	475	115	65	65	125
	Fraser	45	560	140	85	100
	Van Coastal	30	80	40	25	10
	Van Island	65	90	90	300	45
	Northern	80	10	15	30	435

In Table 6, the dispersion of the remaining 40% of intra-provincial Aboriginal Identity migrants who did cross health authority borders can be seen. As total intra-provincial migration must sum to zero, the Interior and Fraser Health Authorities both experienced positive net migration, which was offset by the negative net migration in the other three regions.

The North American Indian migration pattern shown in Table 7 displays a larger net out-migration from the Vancouver Island Health Authority, as well as a smaller net out-migration from the Northern Health Authority.

On the other hand, the Métis migration distribution shows positive net migration in an additional third region, the Vancouver Island Health Authority. Compared with the North American Indians, the Métis also show greater net out-migration in the Northern Health Authority, as well as greater relative net in-migration in the Interior and Fraser Health Authorities.

Van Island	290	205	85
Northern	135	280	-145

Age Distribution of Migrants

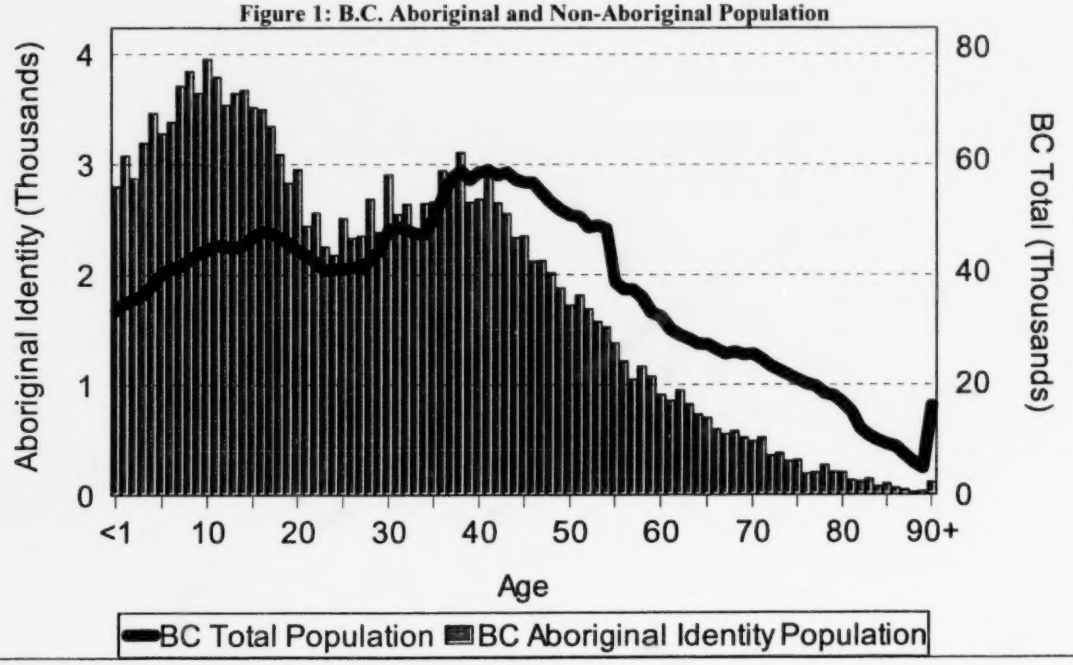
One important characteristic about the Aboriginal Identity population in B.C. is that it is younger than B.C. as a whole. Figure 1 compares the age distribution of the total Aboriginal population with that of B.C.'s combined Aboriginal and non-Aboriginal population. This shows that the Aboriginal Identity population contains a higher proportion of young people and a lower proportion of elderly than B.C. at-large. The age distribution of Aboriginal Identity individuals includes a higher number of people under 20 years old, as well as a lower number of people over 45 years old.

Table 9 displays the mean and median ages for migrants as well as for the total Aboriginal Identity population in each health region. In general, migrants are slightly younger than the total population. The mean age of the Vancouver Coastal Health Authority is by far the highest, at 31 years old. Also interesting is that with one exception, all migrants have mean and median ages at least as low as that of the regional population. The exception is with the in-migrants to the Northern Health Authority.

Table 9: Average Age of Migrants by Region

		Average Age		
		In-Migrants	Out-Migrants	Total Population
Interior	Mean	25.8	27.2	28.9
	Median	23	25	27
Fraser	Mean	26.1	24.5	27.3
	Median	24	24	25
Vancouver Coastal	Mean	27.3	28.1	30.9
	Median	26	26	31
Vancouver Island	Mean	24.3	25.9	27.8
	Median	24	25	25
Northern	Mean	29.0	26.2	27.6
	Median	28	24	25

Figure 1: B.C. Aboriginal and Non-Aboriginal Population



Age Distribution of Migrants

Figures 2 through 6 display the age distribution of the total Aboriginal Identity population and their migration patterns in each of the five health authorities. It is clear from these graphs that migration is an activity of the young. For all regions, intra-provincial migration among individuals over 65 years old is negligible.

Each region exhibits a similar bimodality as is observed in the total B.C. Aboriginal Identity population in Figure 1. One mode is located near 10 years of age and the other mode is near 40 years of age. Interestingly, the Vancouver Coastal Health Authority is the only region where the second mode reaches higher than the first, indicative of the regions higher average age.

Despite only two of the five health regions experiencing positive net migration over the period, all of the in- and out-migrant age distributions appear to track closely. So either coming or going, the age profile of the migrants is similar.

Figure 2: Interior Health Authority, Aboriginal Identity Age Distribution

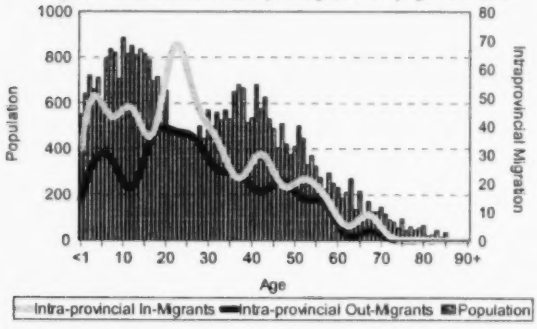


Figure 3: Fraser Health Authority, Aboriginal Identity Age Distribution

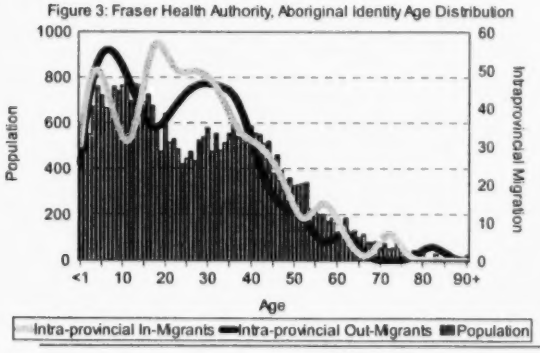

Figure 4: Van Coastal Health Authority, Aboriginal Identity Age Distribution

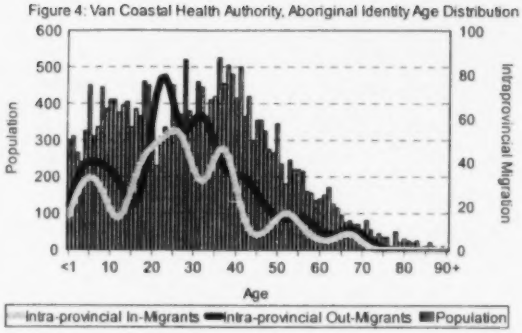

Figure 5: Van Island Health Authority, Aboriginal Identity Age Distribution

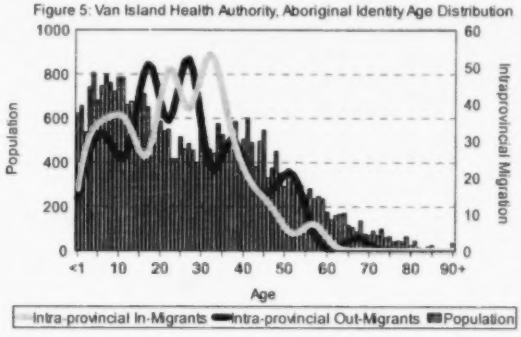

Figure 6: Northern Health Authority, Aboriginal Identity Age Distribution

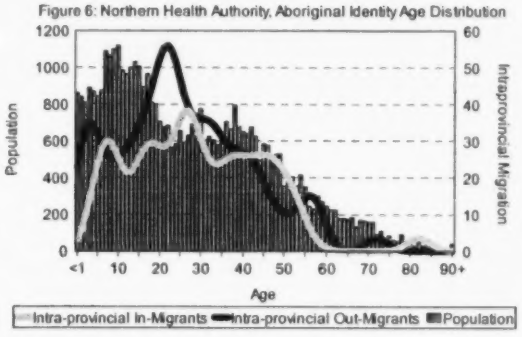

Age Distribution of Migrants

Figures 7 through 11 again display the migration patterns of the total Aboriginal Identity population in each region. Most migrants appear to be aged 20-40. This is evidenced by the "bulges" that occur at these ages in the graphs. In some regions, the 1-10 year olds also appear to have large migration flows. This is not surprising as many of the 20-40 year old migrants can be expected to have families with children moving with them.

It also does not appear that the flow of migrants between regions has a large effect on the underlying age structure in the short run. Most of the migration inflows and outflows are offsetting, leaving only relatively small changes in the age structure from net migration.

Conclusion

It is clear that the composition of British Columbia's Aboriginal population has some important characteristic differences from the total provincial population. Yet without more data, extrapolating larger, long-term trends will prove challenging. Indeed, we still do not have a very good idea of how these regional trends evolve over time, or how the motivation to migrate for Aboriginal British Columbians compares to the motivation of other British Columbian migrants. As new data, such as the 2006 Canadian Census, become available we will be able to refine our understanding and prepare to answer these and other questions.

Prepared by: Population Section, BC STATS. Date: 26 March 2008

Source: Statistics Canada.

Note: Net N.P.R. - Net change in the number of Non-Permanent Residents.
Due to revisions on the part of Statistics Canada, the sum of the components may not equal the population change.
"-" indicates no data available. All figures subject to revision.
